Frontend Web Development

Create a Website for an IT Consulting Firm

Description:

Build a professional **IT consulting firm website** that showcases the company's expertise in **digital transformation services**. The website should include a structured layout with information about the company, its services, and client testimonials, along with a **call-to-action (CTA)** to encourage visitors to get a **free consultation**.

Features:

Hero Section – A welcome message with a CTA button ("Get a Free Consultation").

About Us – Brief introduction about the company and team.

Our Services – IT solutions such as cloud computing, automation, and DevOps or you can add any of your choice

Client Testimonials – Display feedback from businesses that used the services.

Contact Form – Simple form with fields for Name, Email, and Message.

Technologies:

HTML, CSS, JavaScript

Frontend libraries/frameworks (optional, can be used to enhance interactivity).

Key Requirements:

- ◆ Use JavaScript for interactive elements (e.g., **a testimonials carousel**).
- ◆ Implement a **hover effect** on buttons and navigation links.
- ◆ Ensure **smooth scrolling** for navigation links.
- ◆ The website should have a **responsive design** to look good on all devices.

Bonus Points:

- ✦ Add animations (e.g., **fade-in effects** for sections as they come into view).
- ✦ Include a dynamic pricing table with a **toggle for monthly/yearly plans**.
